Yellow Pear	yellow	1-2"	75	no	no	I	sweet	yes	One of the prettiest tomatoes; beautiful in salads

Indeterminate: also called "vining" tomatoes. grow and produce fruit until killed by frost and can reach heights of 6-10 feet (6 feet is the norm) - bloom, set new fruit and ripen fruit all at the same time throughout the growing season - substantial caging and/or staking required and pruning and the removal of suckers is practiced by many but is not mandatory.

Determinate: also called "bush" tomatoes, grow to a compact height (approx. 4 feet) - stop growing when fruit sets on the top bud - ripen all their crop at or near the same time (usually over a 2 week period) - limited amount of caging and/or staking required - should NOT be pruned or "suckered" as it severely reduces the crop - perform well in a container (5-6 gallon size).
